

Passenger rail usage January to March 2026

18 June 2026 (updated on 23 June 2026)

Background:

This quarterly statistical release contains information on passenger rail usage in Great Britain. It covers **passenger journeys, passenger kilometres, revenue, passenger train and vehicle kilometres**.

Statistics are presented by **ticket type, sector and train operator**.

Sources: LENNON ticketing and revenue system, train operators, TfL and Network Rail.

To account for inflation, historic quarterly revenue data has been adjusted to January to March 2026 prices using the Consumer Prices Index (CPI).

Numbers in this release are rounded.

Latest quarter: 1 January to 31 March 2026

Contents:

Annual data – p3
Journeys – p5
Kilometres – p7
Revenue – p10
Train kilometres – p13
Vehicle kilometres – p14
Annexes – p15

Responsible statistician:

L Al-Ajeel

Next publication:

1 October 2026

A total of **447 million journeys** were made by rail passengers in Great Britain in the latest quarter (January to March 2026). This is a 4% increase on the 429 million journeys in the same quarter in the previous year (January to March 2025).

Figure 1 Passenger journeys, Great Britain, quarterly data, April 2020 to March 2026

Note that passenger journey data from April 2020 has been marked as provisional, as we expect to revise this in a future quarterly statistical release to adjust for the impact of split ticketing.

Total **passenger revenue** was **£2.9 billion** in the latest quarter, a 1% increase compared with the same quarter in the previous year (when adjusted for inflation). There were **16.3 billion passenger kilometres** travelled in total in Great Britain in the latest quarter. This is a 3% increase compared with the 15.8 billion travelled in the same quarter in the previous year.

We are proposing changes to this publication. Details can be found on page 2. For feedback or questions, please email rail.stats@orr.gov.uk.

All data tables, a quality and methodology report and an interactive dashboard associated with this release are published on the [passenger rail usage page](#) of the ORR data portal. Key definitions are in Annex 1 of this release.

Context for these statistics

Proposed changes to the publication

We recognise that some of measures presented in the publication are highly correlated and will therefore show similar trends. To shorten and simplify the release, we propose removing analysis on usage by rail sector and on passenger kilometres by operator. Data on journeys, passenger kilometres and revenue by rail sector will continue to be published on Tables 1211, 1221 and 1231 respectively on the ORR data portal. Data on passenger kilometres by operator will continue to be published in Table 1233 on the ORR data portal. For feedback or questions, please email rail.stats@orr.gov.uk.

Elizabeth line infrastructure

Prior to May 2022, TfL Rail operated services which ran between Paddington and Reading or Heathrow Airport, and between Liverpool Street and Shenfield. These have subsequently been branded as ‘Elizabeth line’ services. Since the central section of the Elizabeth line opened in May 2022, we have seen substantial changes in journey patterns which have impacted these statistics. The mainline rail journeys on the central section are now recorded in LENNON (the ticketing and revenue system which is the main source of these statistics). These journeys have effectively ‘replaced’ some journeys that were previously taken on other modes (i.e. not mainline rail) that are not recorded in LENNON, such as London Underground and Docklands Light Railway (DLR). This has resulted in a significant uplift in journeys for Elizabeth line since May 2022.

Split ticketing

As estimates of passenger journeys are primarily based on ticket sales, there are limitations that users should be aware of, see Annex 1 of this statistical release and the associated Quality and methodology report for more information. In particular, some train operators’ journeys may be overestimated due to the impact of passengers buying ‘split tickets’ (this is where a passenger completes a single journey using two or more tickets). Rail Delivery Group (RDG) estimates that overall, around 5% of passenger journeys between April 2023 and March 2024 were made using split tickets (it was around 4% in the previous year). Split ticketing has become more prevalent in recent years, therefore the extent to which it affects rail usage statistics has increased. It may be that the recovery of journeys relative to before the pandemic is overstated. Passenger kilometres are not affected by trends in split ticketing.

We are working with RDG to improve our published estimates of passenger journeys by incorporating an adjustment for split ticketing to more accurately reflect the actual number of journeys made. **We will continue work to incorporate split ticketing adjustments as soon as possible. This will include revisions to historic passenger journey data back to April 2020.**

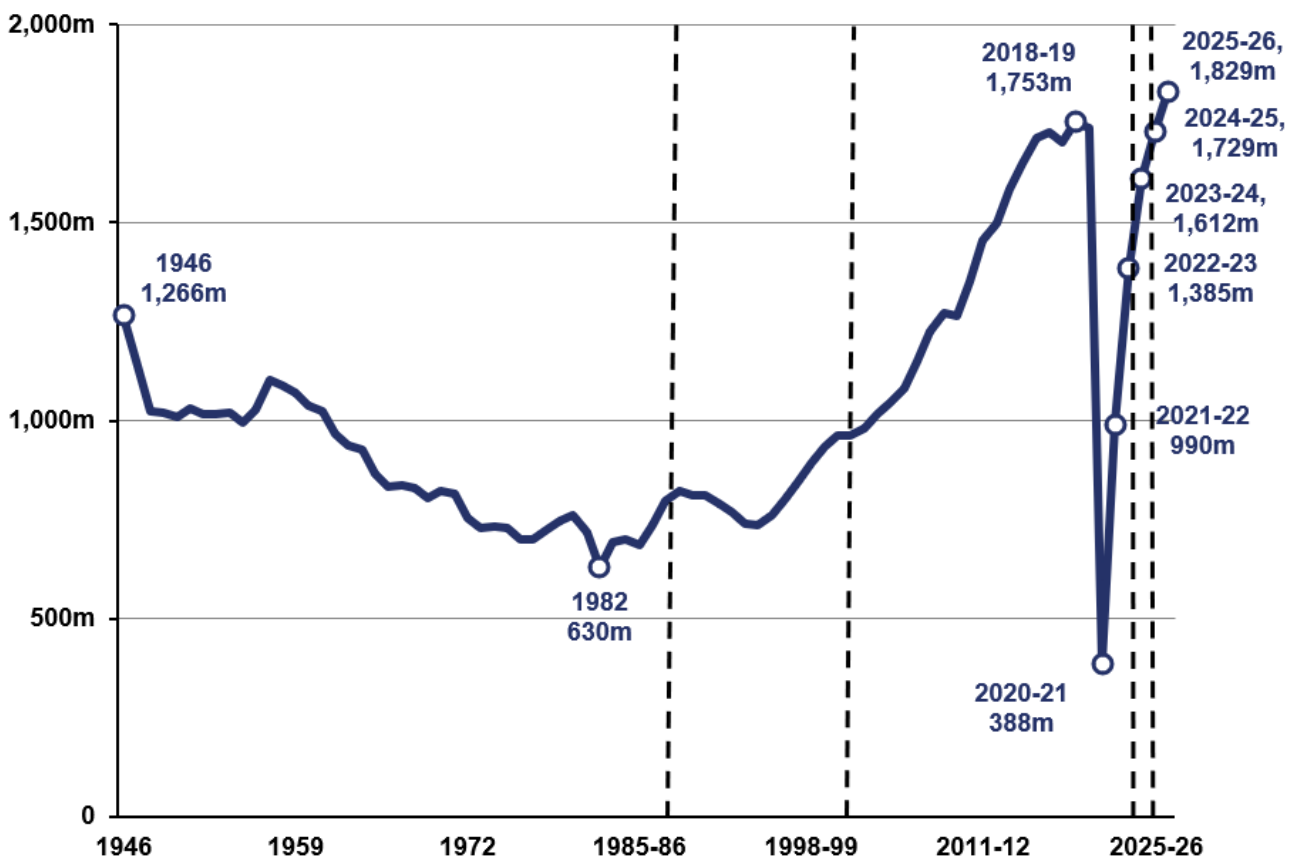

1. Annual data

Passenger journeys

A total of 1.8 billion journeys were made by rail passengers in Great Britain in the latest year (April 2025 to March 2026). This is a 6% increase on the 1.7 billion journeys in the previous year (April 2024 to March 2025).

Figure 1.1 Passenger journeys have exceeded pre-pandemic levels

Passenger journeys (millions) from January 1946 to March 2026, Great Britain (Table 1220)

Note: The data source varies across the timeseries. Series breaks are represented by dashed lines. More information can be found in the [quality and methodology report](#).

Passenger kilometres

In the latest year, there were 67.7 billion passenger kilometres travelled in Great Britain. This is a 5% increase compared with the 64.6 billion travelled in the previous year.

Passenger revenue

In the latest year, total passenger revenue in Great Britain was £12.3 billion. Adjusted for inflation, this is 4% more than the £11.9 billion generated in the previous year.

In the latest year, a total of £11.1 billion was generated across all ordinary fare tickets, an increase of 4% compared with the £10.7 billion in the previous year. The percentage changes in revenue varied across all franchised ticket types. Advance ticket revenue increased by 6% compared with the previous year, followed by Off-Peak tickets and Season tickets (each up 3%) and Anytime or Peak tickets (up 2%).

Advance saw an increase in revenue per kilometre compared to the previous year (up 0.7%), with Anytime or Peak tickets (down 2%) and Off-Peak tickets (down 0.9%) recording a decrease. Revenue per kilometre decreased by 1% for Season tickets.

Figure 1.2 Total revenue increased for all franchised¹ ticket types except Off-Peak

Percentage change in franchised passenger revenue and revenue per kilometre, by ticket type, in April 2025 to March 2026 compared with April 2024 to March 2025 (April 2025 to March 2026 prices; Tables 1232 and 1212)

Passenger train and vehicle kilometres

In the latest year, there were 544 million passenger train kilometres operated. This is a 4% increase on the 524 million passenger train kilometres in the previous year.

There were 3.3 billion passenger vehicle kilometres operated. This is a 4% increase on the 3.2 billion passenger vehicle kilometres in the previous year.

¹ Franchised operators run services as part of contracts awarded by government (although no longer franchises, we have retained this term for referring to these operators for consistency and until a new term is adopted across the industry).

2. Passenger journeys

Passenger journeys by sector and operator

In the latest quarter, 447 million passenger journeys were made in Great Britain. This is a 4% increase on the 429 million journeys in the same quarter in the previous year.

Figure 2.1 Passenger journeys increased for most operators

Passenger journeys by operator, January to March 2026, and the percentage change (rounded) from January to March 2025 (Table 1223)

Passenger journeys increased for most operators compared with the same quarter in the previous year. Lumo (East Coast)² had the largest percentage increase in passenger journeys. The 0.4 million journeys in the latest quarter was a 23% increase on the 0.3 million recorded in the same quarter in the previous year. Caledonian Sleeper recorded

² The new Lumo service between London Euston and Stirling commenced in May 2026. This will be reported under “Lumo (West Coast)” in future releases, while the existing Lumo services will be reported under “Lumo (East Coast)”.

the largest percentage decrease (down 7% to 0.1 million) compared to the same quarter in the previous year.

The London and South East sector recorded 312 million journeys in the latest quarter, making it the largest sector. This is a 4% increase on the 300 million journeys in the same quarter in the previous year. The Long Distance sector recorded 37.9 million journeys in the latest quarter, an increase of 3% compared with the 36.9 million in the previous year. The Regional sector recorded 94.8 million journeys, a 5% increase on the 90.6 million journeys recorded in the previous year.

There were 2.2 million passenger journeys recorded for all open access operators combined, which is a 4% increase compared with the same quarter in the previous year.

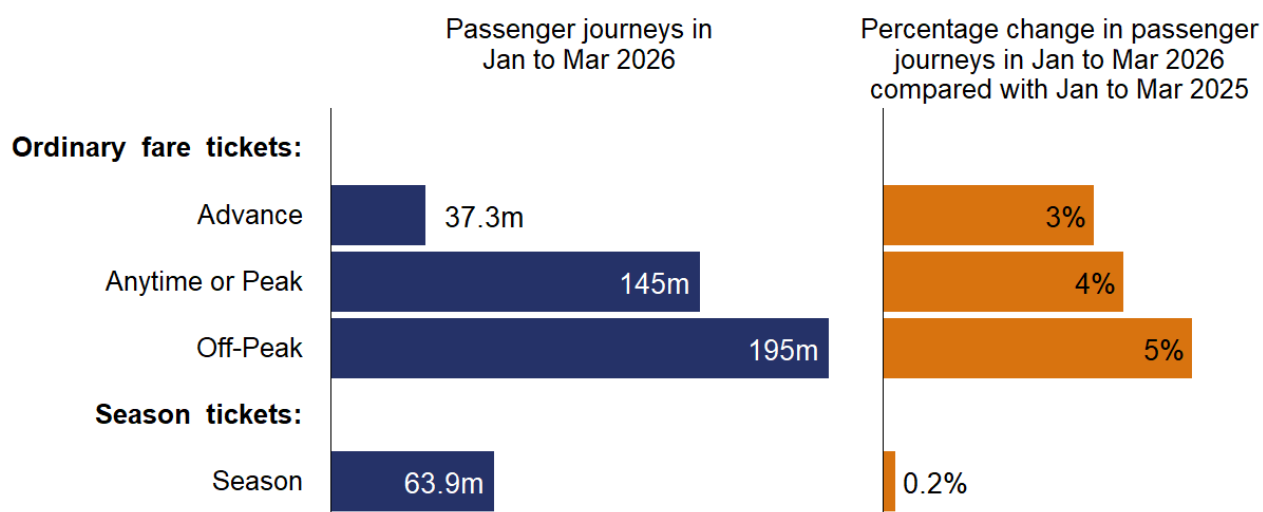

Franchised passenger journeys by ticket type

There were 63.9 million franchised passenger journeys made using Season tickets in the latest quarter. This is a 0.2% increase on the 63.7 million journeys made in the same quarter in the previous year. Season tickets made up 14% of total franchised ticket sales in the latest quarter, down from 15% in the same quarter in the previous year.

There were 381 million journeys made using ordinary fare tickets in the latest quarter. This is a 5% increase compared with the 364 million journeys made in the same quarter in the previous year. Journeys using all ordinary fare ticket types increased compared with the same quarter in the previous year. Off-Peak tickets had the largest percentage increase, up 5% compared with the same quarter in the previous year. Journeys using Anytime or Peak (up 4%) and Advance (up 3%) tickets also increased compared with the same quarter in the previous year.

Figure 2.2 Usage increased for all franchised ticket types

Franchised passenger journeys in January to March 2026 and percentage change (rounded) compared with January to March 2025, by ticket type (Table 1222)

Note: The Other ticket type category is excluded, as this includes refunds and other miscellaneous tickets and purchases, which can lead to negative numbers. However, this data can be found in Table 1222.

3. Passenger kilometres

Passenger kilometres by sector and operator

In the latest quarter, there were 16.3 billion passenger kilometres travelled in total in Great Britain. This is a 3% increase compared with the 15.8 billion travelled in the same quarter in the previous year.

In each of the three franchised sectors, there was an increase in the kilometres travelled, compared with the same quarter in the previous year. For all sectors except Long Distance, there was a larger increase in journeys than kilometres. The average passenger journey length for Regional operators decreased by 1.7%, with London and South East recording a decrease of 0.5%. Long Distance operators recorded a 0.1% increase compared with the same quarter in the previous year.

Figure 3.1 Passenger kilometres increased in all three sectors

Percentage change in franchised passenger journeys, kilometres and kilometres per journey, by sector, in January to March 2026 compared with January to March 2025 (Tables 1221 and 1231)

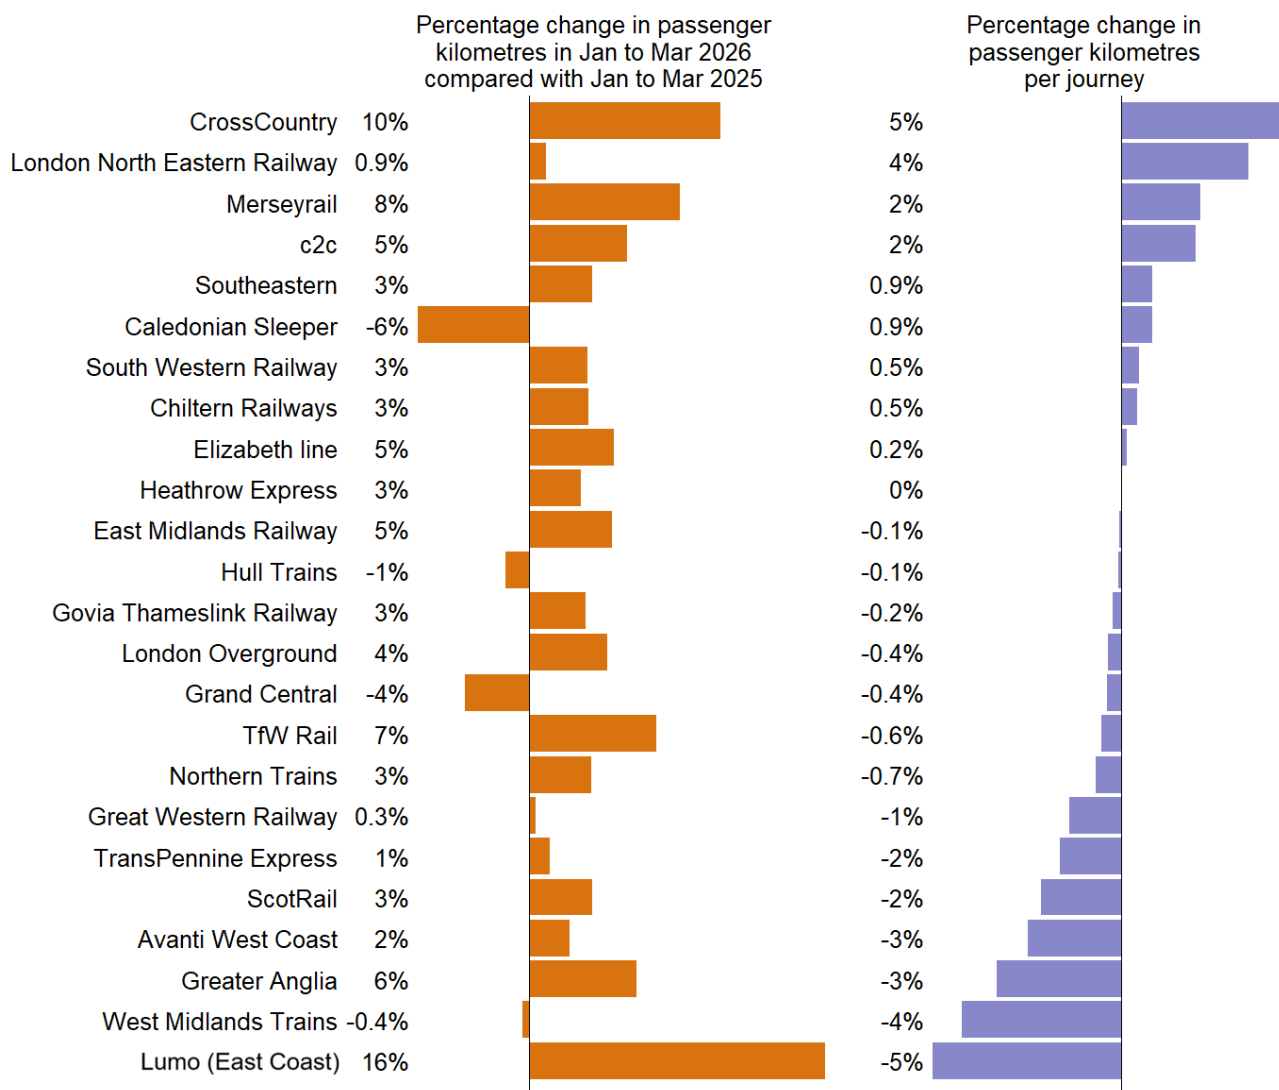

All operators except for Caledonian Sleeper (down 6%), Grand Central (down 4%), Hull Trains (down 1%) and West Midlands Trains (down 0.4%) reported an increase in

passenger kilometres compared with the same quarter in the previous year, with Lumo (East Coast) (up 16%), and CrossCountry (up 10%) recording the largest increases.

Passenger kilometres travelled per journey increased for nine operators in the latest quarter compared with the previous year. CrossCountry (up 5%) and London North Eastern Railway (up 4%) recorded the largest increases in passenger kilometres per journey. Fourteen operators recorded decreases in kilometres travelled per journey, with Lumo (East Coast) (down 5%) recording the largest decrease, followed by West Midlands Trains (down 4%). Heathrow Express was unchanged in the latest quarter compared with the previous year.

Figure 3.2 Passenger kilometres per journey decreased for just over half of operators compared with the same quarter in the previous year

Percentage change in passenger kilometres and kilometres per journey, by operator, in January to March 2026 compared with January to March 2025 (Tables 1223 and 1233)

Passenger kilometres by ticket type

In the latest quarter, passenger kilometres travelled increased for all franchised ticket types compared with the same quarter in the previous year. Advance tickets had the largest percentage increase, up 5% to 5.1 billion from 4.9 billion in the same quarter in the previous year, followed by Anytime or Peak (up 3%) and Off-Peak (up 1%). There was a reduction in the average journey length for Off-Peak (down 4%) and Anytime or Peak tickets (down 0.7%), with Advance tickets (up 2%) recording an increase.

Season tickets recorded a 3% increase in passenger kilometres and a 2% increase in average journey length compared to the same quarter in the previous year.

Figure 3.3 Passenger kilometres increased for all ticket types

Percentage change in franchised passenger kilometres and kilometres per journey, by ticket type, in January to March 2026 compared with January to March 2025 (Tables 1222 and 1232)

Note: The Other ticket type category is excluded, as this includes refunds and other miscellaneous tickets and purchases, which can lead to negative numbers. However, this data can be found in Table 1222.

4. Passenger revenue

To account for inflation, historic data has been adjusted to prices for the latest quarter (January to March 2026), using the Consumer Price Index (CPI). For further information see the [quality and methodology report](#).

Historically, regulated rail fares have increased annually based on the Retail Price Index (RPI) in July of the previous year. The [March 2025 cap for England and Wales regulated fares was set at 4.6%](#), 0.3 percentage points below the cap set in March 2024 (4.9%). In Scotland, [all ScotRail fares increased by 3.8%](#) on 1 April 2025, down from the 8.7% increase in April 2024 after previously being frozen during the pandemic. The average annual change across all rail fares in March 2025 was 5.1%. This means, in real terms, the average cost of rail tickets increased. See our [Rail fares index](#) statistics for more information.

Passenger revenue by sector

[Some of the information in the following paragraphs on this page was corrected on 23 June 2026. For more details, see pages 19 and 20.]

In the latest quarter, total passenger revenue in Great Britain was £2.9 billion. Adjusted for inflation, this is 1% more than the revenue generated in the same quarter in the previous year.

Passenger revenue per journey across all operators was £6.59 in the latest quarter, a 3% decrease compared with the £6.78 in the same quarter in the previous year. Passenger revenue per kilometre was 18.1 pence, a 2% decrease on the 18.5 pence recorded in the same quarter in the previous year.

With a total revenue of £1.5 billion, London and South East remained the largest sector in the latest quarter and recorded the largest increase in revenue, up 1.8% on the same quarter in the previous year. The Regional sector recorded a total revenue of £473 million, up 1.0% on the £468 million in the same quarter in the previous year. Long Distance operators recorded revenues of £945 million, up 0.6% on the £940 million recorded in the same quarter in the previous year. Passenger revenue per kilometre decreased for all sectors.

Across franchised passenger operators, total passenger revenue was £2.9 billion in the latest quarter, up 1% compared with the same quarter in the previous year. Franchised passenger revenue per journey was £6.51 in the latest quarter. This is a 3% decrease from the £6.68 recorded in the same quarter in previous year. Passenger revenue per kilometre decreased by 2% to 18.2 pence, from 18.6 pence in the same quarter in the previous year.

Figure 4.1 Revenue and kilometres increased in all sectors

Percentage change in franchised passenger revenue, kilometres and revenue per kilometre, by sector, in January to March 2026 compared with January to March 2025 (January to March 2026 prices; Tables 1231 and 1211)

Open access operators accounted for 2% of total Great Britain passenger revenue. Their total passenger revenue was £53.3 million in the latest quarter, a 5% decrease on the £55.9 million in the same quarter the previous year. Passenger revenue per journey was £24.00, which was 8% less than the £26.12 in the previous year. Passenger revenue per kilometre was 14.2 pence, 9% less than the 15.6 pence in the previous year.

Passenger revenue by ticket type

In the latest quarter, a total of £2.6 billion was generated across all ordinary fare tickets, an increase of 1% compared with the same quarter in the previous year. The percentage changes in revenue varied across all franchised ticket types. Advance ticket revenue increased by 4% compared with the same quarter in the previous year, followed by Off-Peak tickets (up 1%), whilst Anytime or Peak tickets recorded a 1% decrease. Season tickets also generated more revenue in the latest quarter, with £267 million compared with £265 million in the same quarter the previous year (up 0.5%).

All sectors saw a decrease in revenue per kilometre compared to the same quarter in the previous year except for Off-Peak tickets which remained unchanged. Anytime or Peak tickets (down 4%) recorded the greatest decrease, with Advance tickets (down 1%) also recording a decrease. Revenue per kilometre decreased by 2% for Season tickets.

Figure 4.2 Total revenue increased for all franchised ticket types except Anytime or Peak

Percentage change in franchised passenger revenue and revenue per kilometre, by ticket type, in January to March 2026 compared with January to March 2025 (January to March 2026 prices; Tables 1232 and 1212

Note: The Other ticket type category is excluded, as this includes refunds and other miscellaneous tickets and purchases, which can lead to negative numbers. However, this data can be found in Table 1212.

5. Passenger train kilometres

Passenger train kilometres include only the distance covered by a locomotive itself and does not account for the number of carriages. In the latest quarter, there were 135 million passenger train kilometres travelled. This is a 3% increase on the 132 million recorded in the same quarter in the previous year.

Most operators recorded increases, with Lumo (East Coast) and London North Eastern Railway (both up 17%) and Avanti West Coast (up 10%) recording the greatest increases.

Six operators recorded decreases compared with the same quarter in the previous year, with Great Western Railway (down 0.9%), West Midlands Trains, Hull Trains and c2c (each down 0.5%) recording the largest decreases.

Figure 5.1 Most operators recorded an increase in passenger train kilometres

Passenger train kilometres by operator, January to March 2026, and percentage change from January to March 2025 (Table 1243)

6. Passenger vehicle kilometres

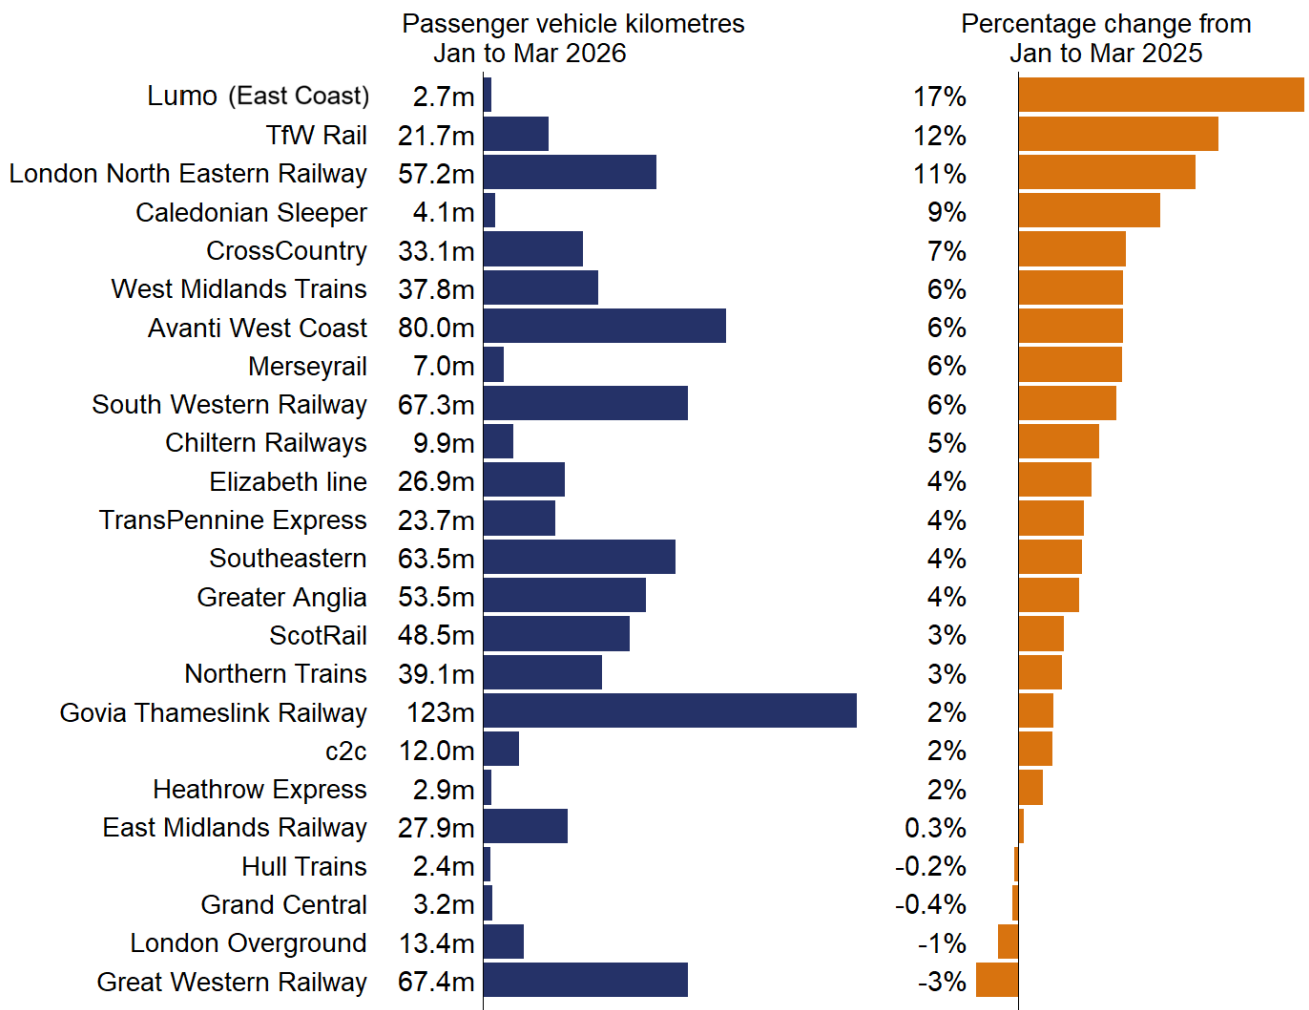

Passenger vehicle kilometres include both the distance covered by locomotives and the carriages they transport. In the latest quarter, there were 828 million passenger vehicle kilometres operated. This is a 4% increase on the 796 million kilometres in the same quarter in the previous year.

Lumo (East Coast) recorded the largest increase in vehicle kilometres (up 17%), compared with the same quarter in the previous year. There were also notable increases for TfW Rail (up 12%) and London North Eastern Railway (up 11%).

There was a reduction in vehicle kilometres operated for four operators. The largest reduction was recorded by Great Western Railway (down 3%), followed by London Overground (down 1%) and Grand Central (down 0.4%)

Figure 6.1 Most operators recorded an increase in passenger vehicle kilometres

Passenger vehicle kilometres by operator, January to March 2026, and percentage change from January to March 2025 (Table 1253)

7. Annexes

Annex 1 – Definitions

- **Passenger journeys** are estimated using ticket sales data. For the purpose of these statistics, where travel requires one or more changes of train, each train used is counted as one journey. For example, a journey from Leicester to Manchester would be classed as two journeys due to the need to change trains. This differs from the definition used in the [Regional rail usage](#) statistics, which would class this example as one journey. Furthermore, the estimates in this publication do not account for split ticketing, whereas journey estimates in Regional rail usage include an adjustment. Split ticketing is where two or more tickets are purchased to complete a single journey. In such cases, each ticket is counted individually in the passenger journey statistics, in this publication.
- **Passenger kilometres** are calculated by multiplying the number of passenger journeys on a particular flow by the number of corresponding track kilometres between stations.
- **Passenger revenue** statistics include all ticket revenue and miscellaneous charges associated with passenger travel on national railways.
- **Passenger train kilometres** refers to the number of train kilometres travelled by passenger trains. Empty coaching stock movements are included. Sourced from the Track Access Billing System (TABS) it includes train kilometres operated on Network Rail infrastructure and other railway networks including Core Valley Lines, HS1, and TfL infrastructure.
- **Passenger vehicle kilometres** refer to the number of vehicle kilometres travelled by passenger vehicles. They are calculated on the same basis and using the same database (TABS) as passenger train kilometres. A train with a locomotive and four carriages travelling one kilometre will generate one train kilometre and five vehicle kilometres.
- **Average passenger journey length** can be calculated by dividing the total number of passenger kilometres travelled by the total number of passenger journeys.
- The data presented in this release is for **mainline operators** in Great Britain. The data does not include Eurostar, London Underground, light rail, heritage and charter services. **Franchised operators** run services as part of contracts awarded by government (although no longer franchises we have retrained this term for referring to these operators for consistency and until a new term is adopted across the industry). Data for such operators is also presented for three **sectors**:

- **London and South East** – based on the British Rail Network South East services, this sector includes commuter trains in the London area and inter-urban services in South East England. It extends as far west as Bristol and Exeter (both South Western Railway) and as far northwest as Kidderminster (Chiltern Railways). All Greater Anglia services are included in this sector for passenger rail usage purposes. Southeastern high speed services are included too.
- **Long Distance** – based on the British Rail InterCity services, this sector covers Long Distance services on the East Coast, West Coast, Midland, and Great Western mainlines. Some CrossCountry services are also included.
- **Regional** – based on the British Rail Regional Railways services, this sector covers other services. This includes both the ScotRail and TfW Rail³ franchises. TransPennine Express and Caledonian Sleeper are included in this sector for passenger rail usage purposes. Some CrossCountry services are also included.
- **Non-franchised (open access) operators** – licenced by ORR to run services on specific routes. The data tables that accompany this publication contain data for such operators: **Grand Central, Heathrow Express, Hull Trains, Lumo (East Coast)** (began running services on 25 October 2021), and **Wrexham and Shropshire** (ceased trading 28 January 2011).
- **Ticket types:**
 - **Advance** (ordinary ticket) – single one-way tickets for a specific train. They are usually cheaper than other ticket types.
 - **Anytime or Peak** (ordinary ticket) – fully flexible tickets that can be used on most trains and at most times. They are usually more expensive.
 - **Off-Peak** (ordinary ticket) – cheaper than anytime fares, but cannot be used during busier times of day.
 - **Other** (ordinary ticket) – includes usage on regional products, rover tickets, some group tickets, and package products (e.g. includes accommodation or onward travel with other forms of transport). Non-travel income (e.g. car parking) is also included in this category for passenger revenue, as too are **refunds**, which can result in this category showing negative numbers.
 - **Season** – allows unlimited travel between two locations for a specified period (from a week up to a year). Such tickets are generally cheaper than daily return tickets for those travelling more than three times a week. The number of journeys estimated for a season ticket varies by the length of the period. For example, 480 journeys are assumed to have been made for each annual season ticket sold.

³ Includes journeys made on TfW Rail services operated on the Core Valley Lines.

Flexi season tickets are also included here, these allow 8 days of travel in 28 days, any time between two named stations. The pandemic necessitated the use of an alternative methodology for estimating usage with season tickets between 1 April 2020 and 31 March 2021, please see the [Passenger rail usage quality and methodology report](#).

Further information on the operators in each of the three sectors as well as the journey factors for the main season tickets can be found in the [Passenger rail usage quality and methodology report](#).

Annex 2 – Quality and methodology

Primary data source – LENNON

Most of the data contained within this statistical release is sourced from the rail industry's LENNON (Latest Earnings Networked Nationally Over Night) ticketing and revenue system. The statistics presented here use the post-allocation dataset within LENNON that distributes passenger journeys, kilometres and revenue to the train operators. Where travel includes one or more changes of train, each train used is counted as one journey. This is different to [Regional rail usage](#) that uses the pre-allocation dataset. For that release, journeys are based on the origin and destination named on a ticket and do not take into account any changes of train. It therefore produces slightly lower estimates than the total journeys in this Passenger rail usage statistical release.

Lennon is primarily an accounting tool, which inevitably faces limitations for estimating usage precisely. For further information on the limitations of the data and changes made to the methodology between April 2020 and March 2021 due to the pandemic, please see the [Passenger rail usage quality and methodology report](#).

Elizabeth line and overestimate of journeys and kilometres

Contactless and Oyster Pay As You Go (PAYG) travel within the London and South East sector is submitted to LENNON at a level which considers the possible routes customers could have made on their journey. Due to system constraints in how the data is ingested into LENNON, this can result in an overstatement of journey count where multiple routes exist for a single passenger journey. The launch of the Elizabeth line resulted in a particular increase in routing possibilities, most notably from the launch of Phase 5b in November 2022 and therefore increasing the level of overstatement in journey count outputted from LENNON. This overstatement is seen particularly for the Elizabeth line as an operator. However, some residual impact exists for other operators in the London and South East sector particularly on flows outside of London where contactless is now available.

Elizabeth line correction

In order to correct the overestimation, we contacted TfL, who manage Elizabeth line, to request access to the data it holds on the number of journeys travelled. TfL provided us with an extract of the internal database used to monitor journey numbers across the Elizabeth line. This data was only available from 24 May 2022, when the central section of the line opened. From 24 May 2022 onwards, this data was used as a direct replacement for the LENNON data. For estimates of journeys before this date, we used the existing LENNON data. For April 2024 to March 2025, only data from April to May was available from TfL, so we incorporated an adjustment to estimate the number of journeys in June.

From July 2024 onwards, we have used the percentage overstatement of LENNON journeys used for June 2024 and applied that to the LENNON journey numbers to generate an estimate of Elizabeth line journeys. To generate the point-to-point journey data, we attributed Elizabeth line journey data based on the distribution of journeys made using actual TfL data from the previous year. Having calculated the point-to-point journey data, we used our passenger kilometre matrix to calculate the passenger kilometres associated with those journeys. See the [Passenger rail usage quality and methodology report](#) for more information.

Other data sources

The passenger journey and kilometre data from LENNON is supplemented by data provided directly to ORR from five train operators as LENNON does not contain all journeys and associated passenger kilometres. These include journeys made on tickets such as operator specific tickets and Passenger Transport Executive (PTE) multi-modal tickets. Most revenue associated with such journeys is captured by the LENNON system.

The estimates for London Overground passenger journeys and kilometres are adjusted to align with data captured by the operator's train load weight system. As described above, Elizabeth line passenger journeys and kilometres are largely based on data from TfL.

Actual passenger train and vehicle kilometre data is sourced from the Track Access Billing System (TABS). The data is provided by Network Rail.

Recent changes to train operators

Lumo are now referred to as Lumo (East Coast). This to differentiate the services to and from London King's Cross from the Lumo (West Coast) services to and from London Euston which commenced in May 2026.

Further information on individual operators, including route maps, can be found via the [Rail Delivery Group](#) website.

Revisions

There have been revisions to previously published data:

- Tables 1243 and 1253: There have been revisions to the passenger train and vehicle kilometres for Lumo (East Coast) in October to December 2025. Some of the passenger train and vehicle kilometres for Lumo (West Coast) prior to them commencing public services were attributed to Lumo (East Coast).
- The following corrections were made to the passenger revenue by sector section on page 10 of this report on 23 June 2026:
 - The text previously stated that revenue per journey across all operators was £6.51 in the latest quarter, a 3% decrease compared with the £6.68 in the same quarter in the previous year. This has been corrected to show revenue

per journey was £6.59 in the latest quarter, a 3% decrease from the £6.78 recorded in the same quarter in previous year.

- The text previously stated that revenue per kilometre across all operators was 18.2 pence, a 2% decrease on the 18.6 pence recorded in the same quarter in the previous year. This has been corrected to show revenue per journey was 18.1 pence, a 2% decrease on the 18.5 pence recorded in the same quarter in the previous year.
- The text previously stated that London and South East sector has the smallest increase in revenue compared with the same quarter in the previous year. This has been corrected to say the sector had the largest increase in revenue. The increase in revenue for the Regional and Long Distance sectors was previously reported as 0.6% and 1.0% respectively. This has been corrected to show Regional sector increased by 1.0% and Long Distance increased by 0.6%.
- The text previously stated that revenue per franchised journey across all operators was £6.59 in the latest quarter, a 3% decrease compared with the £6.78 in the same quarter in the previous year. This has been corrected to show revenue per franchised journey was £6.51 in the latest quarter, a 3% decrease from the £6.68 recorded in the same quarter in previous year.

Data presented in this release is correct at the time of publication but may change due to subsequent revisions.

Details on previous revisions can be found in the [Revisions log](#).

How these statistics can be used

- Monitoring the number of quarterly passenger journeys and kilometres travelled by mainline rail in Great Britain
- Comparing passenger journeys and kilometres by sector, train operator, and ticket type
- Comparing passenger revenue by sector and ticket type
- Monitoring passenger train and vehicle kilometres by train operator

How these statistics cannot be used

- Monitoring the number of annual journeys within and between Scotland, Wales and Regions of England (refer to [Regional rail usage](#) statistics)
- Monitoring the number of entries and exits or interchanges at individual stations (refer to [Estimates of station usage](#))
- Exploring rail journey flows between origin and destination stations (refer to the [Origin Destination Matrix on the Rail Data Marketplace](#))
- Comparing passenger revenue by train operator (refer to [Rail industry finance](#))

Annex 3 – List of data tables associated with this release and other related statistics

Data tables

All data tables can be accessed on the [ORR data portal](#) free of charge in OpenDocument Spreadsheet (.ods) format. We can also provide data in csv format on request.

All tables associated with this release can be found under the Data tables heading at the bottom of the [Passenger rail usage page](#).

- Revenue per passenger kilometre and per passenger journey (franchised only) - quarterly – Table 1210

Passenger train and vehicle kilometres

- Passenger train kilometres by operator - quarterly – Table 1243
- Passenger vehicle kilometres by operator - quarterly – Table 1253

Other related data

We publish annual [Estimates of station usage](#) statistics, which includes the number of entries, exits and interchanges at all open mainline stations in Great Britain.

We also publish annual statistics on [Regional rail usage](#), which includes the number of rail journeys between and within regions. The Origin and Destination Matrix, which is the source for this and the station usage publication, contains the estimated number of journeys between each pair of mainline stations in Great Britain. Datasets for each of the last five years are available on the [Rail Data Marketplace](#).

The Department for Transport (DfT) also [publishes some rail statistics](#). For example, rail [passenger numbers and overcrowding](#) on weekdays in major cities.

[DfT also publishes statistics on public transport](#) including [statistics on the usage of the Channel Tunnel](#).

[Great British Railways Transition Team previously published rail related news](#), including quarterly statistics on the breakdown of journey types into leisure and business.

European comparisons

Data on [passenger journeys by European country](#) is published by Eurostat. Data on other measures of passenger usage are published in the [IRG-Rail fourteenth Annual Market Monitoring Report](#).

Annex 4 – ORR’s statistical publications

Our statistical practice is regulated by the Office for Statistics Regulation (OSR). OSR sets the standards of trustworthiness, quality and value in the [Code of Practice for Statistics](#) that all producers of official statistics should adhere to. You are welcome to contact us directly with any comments about how we meet these standards by emailing rail.stats@orr.gov.uk. Alternatively, you can contact OSR by emailing regulation@statistics.gov.uk or via the OSR website.

Statistical Releases

This publication is part of ORR’s ‘[accredited official statistics](#)’, which consist of seven annual publications: **Estimates of station usage; Rail industry finance (UK); Rail fares index; Rail safety; Rail infrastructure and assets; Rail environment; Regional rail usage**; one biannual publication: **Passenger rail service complaints**; and three quarterly publications: **Passenger rail performance; Freight rail usage and performance; Passenger rail usage**.

ORR also publishes a number of other official statistics, which consist of five annual publications: **Common Safety Indicators; Passenger satisfaction with complaints handling; Train operating company key statistics; Occupational health; Rail trends (formerly Rail statistics compendium)**; one biannual publication: **Passenger lifts at stations** (official statistics in development); and four quarterly publications: **Signals passed at danger (SPADs); Delay compensation claims; Disabled Persons Railcards (DPRC); Passenger assistance**.

All the above publications are available on the [data portal](#) along with a list of [publication dates](#) for the next 12 months.

Accredited official statistics

Accredited official statistics are called National Statistics in the Statistics and Registration Service Act 2007. They are official statistics that have been independently reviewed by the Office for Statistics Regulation and found to comply with the standards of trustworthiness, quality and value in the Code of Practice for Statistics.

The majority of our [statistical releases were independently reviewed by the OSR in June 2012](#). They comply with the standards of trustworthiness, quality and value in the [Code of Practice for Statistics](#) and are labelled accredited official statistics.

Since our review we have improved the content, presentation and quality of our statistical releases. In addition, in July 2019 we launched our new data portal. Therefore, in late 2019 we worked with the OSR to conduct a compliance check to ensure we are still

meeting the standards of the Code. On 4 November 2019, [OSR published a letter](#) confirming that ORR's statistics should continue to be accredited official statistics. OSR found many positive aspects in the way that we produce and present our statistics and welcomed the range of improvements made since the statistics were last assessed.

Estimates of station usage statistics were [independently reviewed by OSR](#) in November 2020 and [their accreditation was confirmed](#) on 1 December 2020.

For more information on how we adhere to the Code please see our [compliance statements](#).
